## Definition:

Targeted resequencing of those regions transcribed to mRNA.

## History:

- 2014: publication of the report detailing the design and performance of a whole exome sequencing (WES) enrichment assay for the dog: the exome -1.0<sup>1</sup>
- 2015: release of updated canine annotation<sup>2</sup>  
=> development of 2 novel WES designs:
  - Exome-CDS
  - Exome-plus

Probe design: Roche Nimblegen SeqCap EZ Developer

## Sequencing:

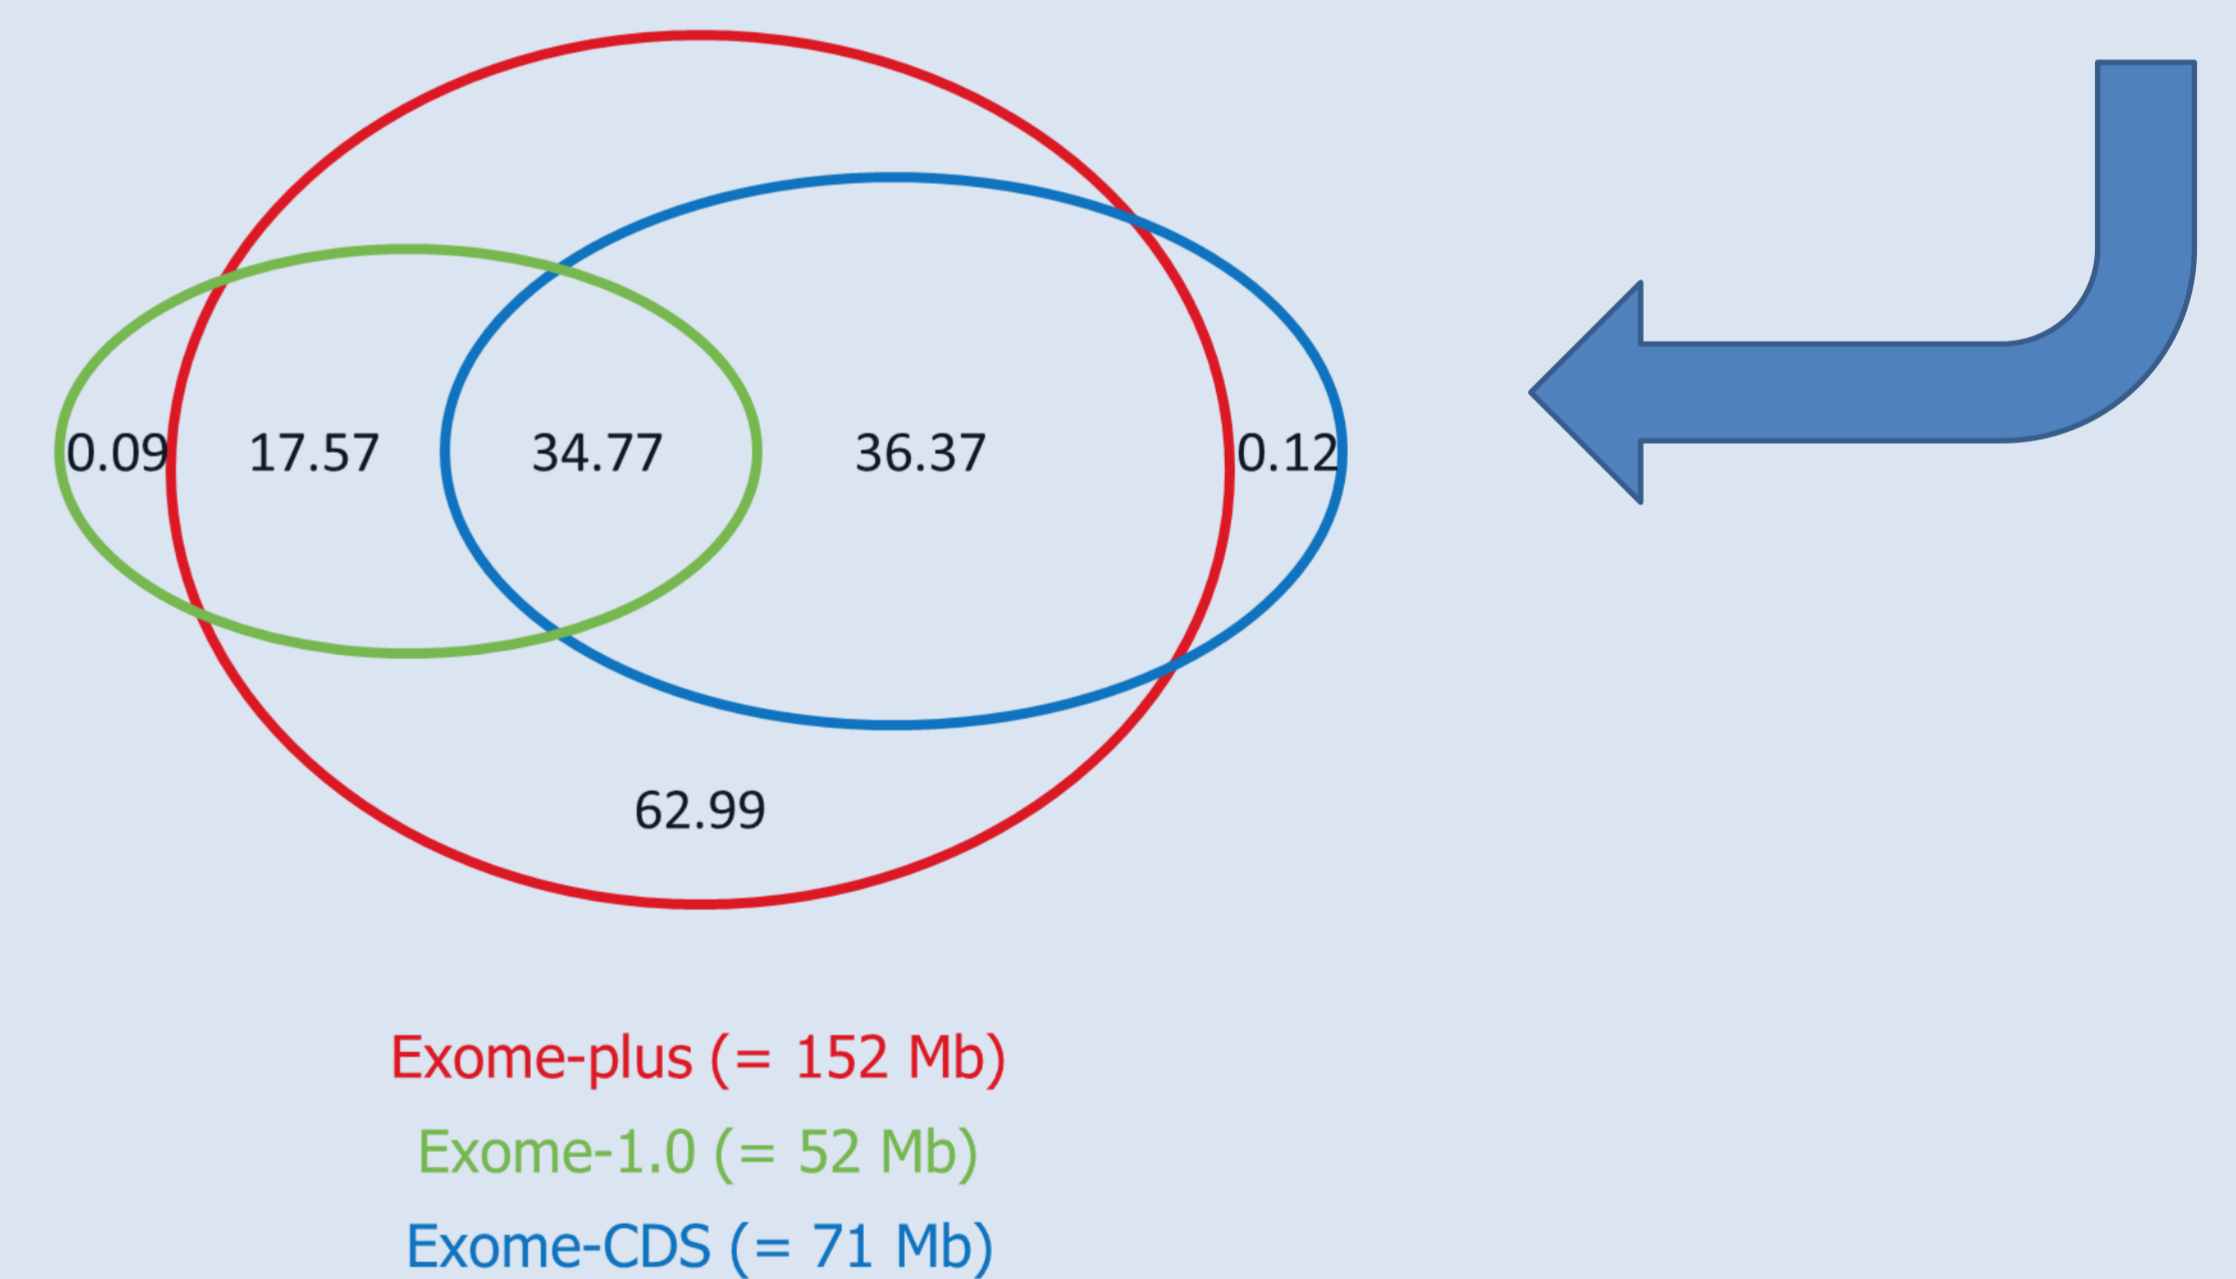

- Exome-1.0: 8 dogs, 2 captures (HiSeq 2500 PE 100 bp)
- Exome-plus: 16 dogs, 4 captures (NextSeq 500 PE 75 bp)
- Capture = 4 pre-capture pooled, barcoded Illumina libraries
- Performance of the exome-CDS: estimated from the exome-plus

## Average output:

	Reads (in million)				Sequencing depth (x)
	Total	Mapped	Duplicate	Remaining (%)	
1.0	90	86	6	80 (88.2%)	101.6
plus	243	226	14	212 (87.2%)	68.3

## Design:

	Exome-1.0	Exome-CDS	Exome-plus
Ensembl Genes	✓	✓ (excl. UTR)	✓
RefSeq Genes	✓	✗	✗
Novel Broad genes <sup>2</sup>	✗	✓ (excl. UTR)	✓
mRNA	✓	✗	✗
microRNAs	✓	✓	✓
long non-coding RNAs <sup>2</sup>	✗	✓	✓
Antisense transcripts <sup>2</sup>	✗	✓	✓
Candidate CDS transdecoder	✗	✓	✗
Number of regions	203,059	244,543	242,914

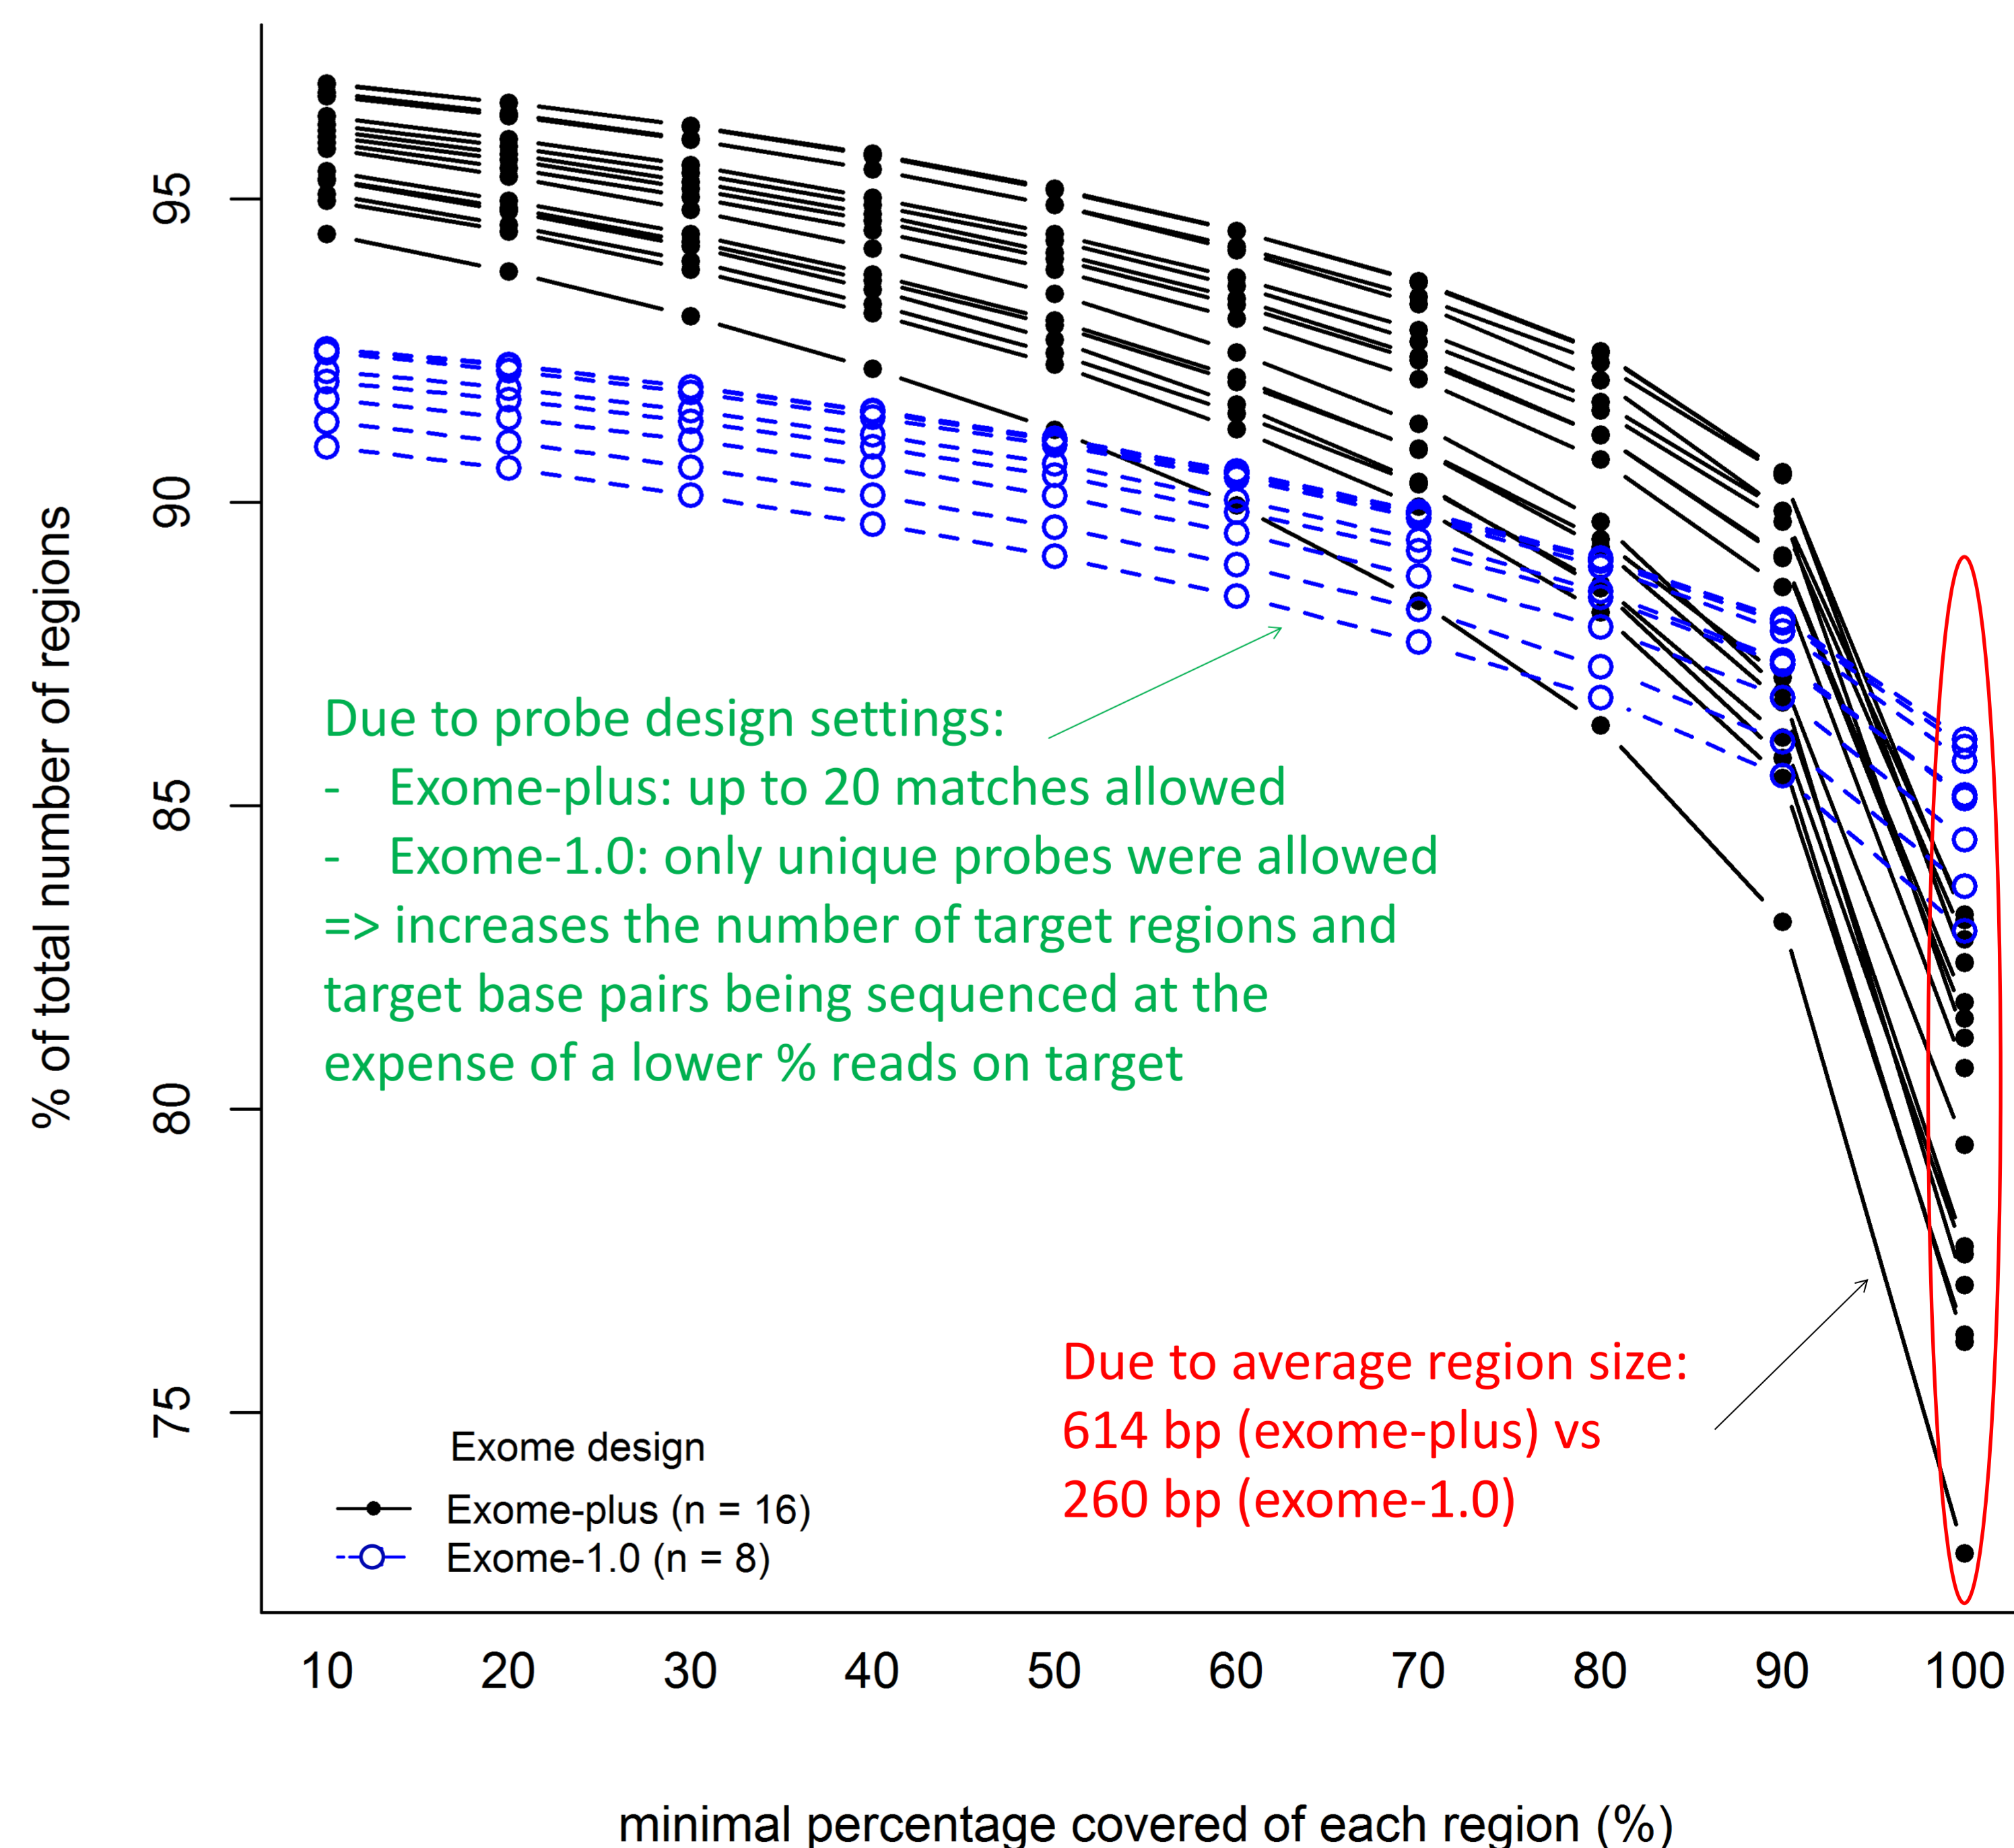

## Comparison average performance:

	Exome-1.0	Exome-CDS	Exome-plus
fully covered regions (%)	84.9	85.4	79.7
base pairs covered (%)	90.2	93.4	95.1
% on target (%)	90.4	-	75.8
reproducibility regions (%)	79.9	71.4	63.5
reproducibility base pairs (%)	87.4	87.7	90.4
non-reference variants (n)	61,820	117,442	266,857

## Conclusion:

- Overall: cost-efficient direct sequencing approach
- User-specific customization options
- Exome-1.0: the core set of protein coding genes
- Exome-plus, exome-CDS: contain many regulatory regions  
=> added value for complex diseases where mutations influencing expression are more likely to be involved<sup>2</sup>
- Exome-plus: most comprehensive design
- Exome-CDS balances completeness and cost-efficiency
